Curriculum
What algebra for seventh and eighth grades? 377–79.
Equation Solving
Omar Khayyam's solution of cubic equations, 285–86.
On the practicality of the rule of false position, 606–08.
Errors in
Degree of accuracy of square roots, 121–22.
Function Concept
Some implications of twentieth century mathematics for high schools, 74–86.
Miscellaneous
Are there several kinds of variables? 22.
Coefficients in expansions of powers of special trinomials, 130.
Coefficients in expansions of squares of special polynomials, 130.

Teaching Methods
Factoring the quadratic trinomial, 26–27.
Self-instructive enrichment topics for bright pupils in high school algebra, 113–17.
Things and un-things, 14–15.
Verbal Problems
Tips for Beginners, 212–13.
APPLICATIONS OF MATHEMATICS
"Applications" in freshman courses: an example, 276–79.
Pendulum patterns, 291.
Some family finance topics for seventh and eighth grade mathematics, 128–30.
APPROXIMATE COMPUTATION
Computations with approximate numbers, 521–30.
ARITHMETIC
Teaching percentage for understanding and use, 38–41.
AWARDS, CONTESTS, AND HONORS
The national high school mathematics contest, 434–39.
The Seventh Mathematical Olympiad for secondary school students in Poland, 585–89.
BIBLIOGRAPHIES
Finding out about "modern mathematics," 93–95.
BIOGRAPHY, AUTOBIOGRAPHY AND TRIBUTES. *See also* HISTORY OF MATHEMATICS. *See also* MEMORIAL (In memoriam).
Sir Isaac Newton: 1642–1727, 124–27.
CALCULUS
The Euler identity, 266.
A method for finding the extent of $y = \sqrt[n]{f(x)/g(x)}$, 602.
CLUBS, MATHEMATICS
Meet the Slip Sticks, 306–07.
COMPUTERS
A high school digital computer program, 176–80.
How much—or—how many? 169–75.
The impact of the computer, 162–68.
CURRICULUM
Criticisms of
Elementary school and high school mathematics for the colleges? 16–17.
Mathematics, missiles, and legislation, 514–20.
Mathematics teaching in American classrooms, 344–49.
Observations on the teaching of mathematics in the United States, 194–96.
High School
The ancients versus the moderns, a new battle of the books, 418–27.
The ancients versus the moderns—a reply, 428–33.
College mathematics in the high school, 556–57.
Miscellaneous
Coordination and possible curricular changes, 590–92.
Mathematics in the total school program, 336–43.
EVALUATION. *See also* TESTS. *See also* ABILITY GROUPING. *See also* TEACHER, EVALUATION OF
How a mathematics test is born, 299–302.
Making a test go further, 388–91.
Testing in college mathematics, 135–37.
FOUNDATIONS OF MATHEMATICS
The maneuvers in set thinking, 322–35.
Meta-mathematics and the modern conception of mathematics, 350–57.
GENERAL EDUCATION (Mathematics)
Mathematical contributions to the needs of youth, 609–12.
GEOMETRY
Miscellaneous
Pappus's extension of the Pythagorean Theorem, 544–46.
Teach loci with wire and paint, 562–63.
What is wrong with Euclid? 578–84.
Plane
An aid to writing deductive proofs in plane geometry, 303–05.
Four exercises in cutting figures, 96–104.
A geometric viewpoint in elementary series, 343.
Mascheroni constructions, 370–72.
A new look at medians, 123.
An observation on dissecting the square, 120.
Trisecting an angle, 12–13.
The use of congruence in geometry proofs, 23–25.
Solid
On teaching dihedral angle and steradian, 272–75.
On teaching trihedral angle and solid angle, 358–61.
Teaching Methods
Mobile geometric figures, 375–76.
GUIDANCE
Can we continue to ignore these warnings? 240–45.
New York City schools meet challenge, 462.
Opportunities for careers in the mathematical sciences, 107–12.
Percentage of math and science students swings upward, 132.
Some facts about top talent, 608.
What is happening to the potential scientist or engineer? 596–99.
HISTORY OF MATHEMATICS
Famous Mathematicians
An "a" for an "i," 473–74.
Omar Khayyam, mathematician, 280–85.
Reuter, Gauss, and Göttingen, 603–06.
Miscellaneous
Historically speaking,— 28–37, 124–27, 201–03, 280–86, 370–72, 469–74, 541–46, 603–08.
A history of computers, I, 469–73.
A history of computers, II, 541–44.
"Old tyme" fractions, 466–68.
HUMOR AND SATIRE
A mortifying mistake. (A poem), 104.
On the psychiatrist's couch, 600–01.

LANGUAGE OF MATHEMATICS
Symbols and functions, 232–35.
The teaching of mathematical infinity, 263–66.
Teaching the etymology of mathematical terms, 184–90.
What does '=' mean? 42.
LIMITS
The limit, 443–49.
LITERATURE
Have you read? 17, 127, 140, 203, 231, 252, 262, 376, 379, 427, 452, 566.
Plans for the Journal, 138–40.
Quotations from Bertrand Russell, 190.
Reviews and evaluations, 43–45, 133–34, 208–11, 294–98, 380–87, 479–85, 558–61.
What's new? 9, 122, 183, 269, 349, 387, 439, 520, 546, 584, 623.
LOGARITHMS
The logarithm and its inverse, 105–06.
Logs—Laws of Operation, 608.
MATHEMATICS IN OTHER COUNTRIES
Mathematics in South Australia, 18–22.
Soviet science education and its challenge, 66–73.
MEASUREMENT
The metric system in junior high school, 621–23.
NCTM
Annual Meetings
NCTM, Thirty-sixth Annual Meeting, 141–42.
December Meetings
Nineteenth Christmas Meeting, 495–96.
Minutes
Minutes of the Annual Business Meeting, 488–90.
Miscellaneous
Annual financial report, 487.
Comments on the new membership dues, 564–65.
Membership statistics, 48.
New membership and subscription dues, 143–44.
The 1958 budget, 490–91.
Notes from the Washington office, 48, 143–44, 308–13, 564–66, 624–25.
Operating Committees (1958–59), 567–70.
Registration reports on two recent meetings, 311.
Registrations at two recent conventions, 565–66.
Report of the Committee on Supplementary Publications, 309–10.
Report of the Membership Committee, 398–402, 497–502.
Report of the Secondary School Curriculum Committee, 146–48.
Report of the Television Committee, 144–45.
Report of the Yearbook Planning Committee, 214.
Your professional dates, 57, 152–53, 215, 312–13, 410, 502, 570, 626.
Officers
1959 elections, 410.
Report of 1958 election of officers, 496.
Report of the Nominating Committee, 49–57.
Summer Meetings
Eighteenth Annual Summer Meeting, 396–97.
NOTATION AND TERMINOLOGY. *See also* LANGUAGE OF MATHEMATICS.
Let's try the "fi" system, 456–62.
NUMBER AND NUMBER SYSTEMS
An eighth-grade unit on number systems, 392–95.
Finding two fractions having a special sum, 261–62.
John Wallis and complex numbers, 373–74.
Miniature number systems, 226–31.
A note concerning the construction of $\sqrt{n}$, 463–65.
A note on number creation, 118–19.
The prime numbers, 201–03.
ORGANIZATIONS, PROFESSIONAL. *See also* NCTM. *See also* AFFILIATED GROUPS.
New fields and organizations in the mathematical sciences, 2–9.
Time to stand together, 270–71.
PHILOSOPHY
Breaking through the know-how barrier, 131–32.
An issue in 1911—as it is today, 357.
Mathematics and philosophy, 28–37.
Points and viewpoints, 42, 131–32, 206–07, 292–93, 377–79, 477–78, 556–57, 616–18.
Sweet are the uses of generality, 87–92.
What is an American college for, anyway? 132.
PROBABILITY
Polynomial expansions and a polynomial distribution theorem, 440–42.
PROBLEM SOLVING
An approach to solving word problems, 212–13.
RECREATIONAL MATHEMATICS. *See also* PLAYS AND PROGRAMS.
Bridget, an algebra card game, 614–15.
Christmas in the mathematics classroom, 553–55.
The Mathematics Student Journal, 485.
RESEARCH
Facts, fancy, fabrications, and figures, 236–39.
Research in teaching high school mathematics, 593–95.
These eighth graders don't hate arithmetic, 267–69.
STATISTICS
Let's teach statistics, 253–60.
SYMBOLISM. *See also* LANGUAGE OF MATHEMATICS.
Points and viewpoints, 42.
The weight of a symbol, 477–78.
TEACHER
Education
Academic Year Institutes for secondary mathematics teachers, 152.
In-service institutes for mathematics teachers, 613–14.

National Science Foundation announces thirty-two Academic-Year Institutes for high school teachers of science and mathematics, 624–25.
Organizing the mathematics department in the Montebello Junior High School, 287–91.
Purdue-General Electric Fellowship Program, 13.
Summer institutes for secondary mathematics teachers, 149–50.
Tips for Beginners, 212–13, 303–05, 392–95, 486, 562–63, 621–23.
Social and Professional Position of
Alice in Wonderland, 468.
Let's look at the new mathematics and science teachers, 531–34.
TEACHING METHODS
High School
Creative teaching in mathematics, 535–40.
Junior High
A gratuitous extrapolation in the teaching of per cent, 475–76.
It's up to us! 206–07.
Mathematics in the junior high school, 38–41, 128–30, 204–05, 287–91, 375–76, 475–76, 547–49, 609–12.
Micky's proof of the medians theorem, 453–55.
Teaching digit problems in algebra, 486.
The stock market as a teaching device, 204–05.
The student stockholders, 197–200.
"3×5" Review, 547–49.
What algebra for seventh and eighth grades? 377–79.
Miscellaneous
The "make 'em run" theory, 10–11.
New ideas for the classroom, 550–55, 613–15.
Quality of teaching, 200.
Remedial teaching that builds understanding, 362–69.
Using your Mathematics Student Journal, 138–40.
TELEVISION
Enriching instruction via television, 550–52.
TESTS. *See also* EVALUATION.
Testing Time, 46–47, 135–37, 299–302, 388–91, 619–20.
TEXTBOOKS
The school mathematics study group, 616–18.
TRIGONOMETRY
The changing concept of trigonometry as a school subject, 246–52.
The trigonometric functions, 191–93.
VISUAL AIDS
A mathematics exhibit, 552–53.
